

Project: Implement Facebook (Deadline: Tuesday 11:59 PM)

- 1- Users shall be able to create accounts (Sign Up)
- 2- Users shall be able to login
- 3- Users shall be able to add connections (add friend)
- 4- Users shall be able to accept / decline connections
- 4- Users shall be able to remove Friends
- 5- Users shall be able to search for new connections
- 6- Users shall be able to block someone
- 7- Blocked users are automatically removed from the user's connections and shouldn't appear in the search results.
- 8- Users shall be able to edit their profile information
- 9- Users shall be able to check their notifications
- 10- Users shall be able to logout

N.B: Your project should be based on APIs (except the Login/Signup System).

Ugly projects will get ugly grades - hence the concerned developers will be kicked out of the bootcamp.

Deliverables: Push your work on GitHub and include your Database as well (.sql)
